### INSAR Mission Statement

To present and promote an integrated approach and understanding of research on autism spectrum disorder

#### **Strategic Initiatives**

Setting the Bar - INSAR will promote and enhance the highest quality research agenda at the Society's Annual Meeting and in the Society journal.

Expanding the Scope — INSAR will cultivate cross-cutting breadth of research from basic science to service delivery that encompasses the range of ages and diversity of ASD.

**Global Reach** — INSAR will expand the scope of its activities to encompass global perspectives on ASD.

Next Generation — INSAR will foster opportunities for leadership and career development for the next generation of ASD researchers.

**Building Identity** — INSAR will grow its membership and organizational identity.

# **IMFAR WELCOME**

Welcome to Atlanta! We are very excited to have IMFAR here this year as it signifies the culmination of a citywide commitment to making autism research a priority in our community. To host investigators from over 30 countries showcasing the very best in the field is both an honor and a privilege. This is the largest IMFAR to date. This demonstrates the growing maturity of the autism research community, which now pervades an ever-increasing number of scientific disciplines and methods. Many people contributed to making the facilities and the infrastructure match the importance of the event. Having our reception at the amazing Georgia Aquarium will add size and beauty to our festivities, and there will be some truly talented entertainers you will not want to miss!

There is a wonderful program planned for you. The scientific Program Committee reviewed a record number of abstracts, and under the leadership of Joseph Piven and Laura Klinger, has planned what is sure to be an outstanding meeting. The keynote speakers will excite and inspire with new information and perspectives from research into autism and related fields of study. The Educational and Scientific Panel sessions cover diverse topics and integrate basic and clinical sciences; the Oral Sessions promise to be superb; and the format of the Poster Sessions will provide more opportunities for networking than before. Other highlights will include the Special Interest Group meetings, the 'Meet the Experts' luncheon for trainees, and the popular Technology Poster Session and exhibits. The Lifetime Achievement Award and Advocate Award presentations are sure to be memorable.

This year's meeting would not have been possible without the tireless efforts of many special people. I would like to acknowledge and express my deepest thanks to the INSAR Board for their support and guidance, as well as to the Scientific Program Committee and the many abstract reviewers who have striven to ensure the excellence of the science presented at IMFAR. My special gratitude goes to Joe Dymek of ConferenceDirect, and to Don Mueller from the Marcus Autism Center, whose invaluable assistance throughout the planning process was instrumental in making this meeting a success, and the reception a true celebration, respectively.

I also thank the members of the Local Meeting Planning Committee for their many contributions, including their inspired and tireless efforts in planning and executing a superlative, fully inclusive and free stakeholder preconference.

# SCIENTIFIC PROGRAM

Seventy years after Leo Kanner described the diagnosis of autism, we arrive in Atlanta amidst some amazing new science on this disorder. This year's conference explores Autism Spectrum Disorder from infancy to older adulthood, research topics ranging from cells to services, and includes international research from Atlanta to Addis Ababa.

Over 1,700 abstracts were submitted this year with a final program of more than 1,000 presentations. The abstract submission and review system was changed substantially. Each abstract was read by three reviewers with expertise in the topic in which they were submitted. We had 18 Topic Chairpersons who provided oversight to reviewers and made recommendations to the Program Committee. Final acceptances for this year's program were based both on reviewer ratings and the aim to have a well-rounded program that included all 18 topic areas. In some cases, in order to "fill out" the program, we made the decision to move some presentations from Panels that were not accepted to Oral Sessions. With such a terrific pool of abstracts, there were many high quality papers that were not accepted this year.

In addition to changes in the review process, several changes were made to promote opportunities for scientific discussion. We expanded the footprint of scientific panels and added both a discussant and a period of time to broaden opportunities for conversation by those attending the session. Second, we shifted the posters to either an evening social / science hour or a lunch / science hour. It is our hope that this informal setting will promote an exchange of ideas. Every attempt was made to minimize the simultaneous presentation of information within the same topic area (i.e., Poster Sessions and Oral Sessions on the same topic are, to the extent possible, scheduled at different times).

Keynote presenters were chosen with an eye toward cutting-edge research that can bring new perspectives to our understanding of autism. Professor Declan Murphy will provide the first keynote on approaches to rapidly move forward the translational research agenda to develop effective pharmacologic treatment for ASD. Dr. Marsha Mailick will take a longitudinal view, providing some of the field's first insights into ASD across the adult lifespan. Dr. John Colombo will examine the typical and atypical development of attention in infancy to highlight the importance of early mechanisms in the unfolding of ASD.

This year's conference could not have been created without the dedication of our reviewers, Topic Chairpersons, and Program Committee. We are greatly indebted to them for their incredible commitment to this conference. We thank the INSAR Board for their input and oversight into the changes for this year's conference. We are particularly appreciative of the current (Francesca Happé) and past (Helen Tager-Flusberg) presidents of the Society for their guidance. Last, we wish to thank our terrific support professionals: Jennifer Gentry who was the organizing force behind the conference, Josh Andrews, the computer programmer who magically created an interface between the submission and review system and the reviewers, and Joe Dymek who organized all the onsite activities for the conference.

We are excited about this year's program and anticipate a great meeting. Fingers are crossed that this year's winter will finally end and we won't experience snow in Atlanta in May.

IMFAR Scientific Program Co-Chair

# PRESIDENT'S WELCOME

It is a huge pleasure and privilege to welcome you to IMFAR 2014 in Atlanta; "South of the North, yet north of the South . . . the City of a Hundred Hills" (W.E.B. DuBois, 1903). This is my first IMFAR as president of the International Society for Autism Research (INSAR), and I have been so impressed by the hard work and insight of all who work behind the scenes to make the Society and this meeting such a success.

The preparation for this meeting began well before I took over the presidency; indeed, until recently, the Board has been busy deciding the destinations for IMFAR 2016 and 2017 (Baltimore and San Francisco, respectively). We have confirmed Meeting Chairs (William McMahon and Rebecca Landa) and Program Co-Chairs (Sally Ozonoff and Jacqueline Crawley; Daniele Fallin and Stewart Mostofsky) for the 2015 and 2016 meetings (Salt Lake City and Baltimore, respectively) future meetings. So we have Helen Tager-Flusberg and the previous Board of INSAR to thank for choosing the fabulous destination of Atlanta, and the wonderful Chairpersons for this meeting.

I would like to thank Ami Klin for all his hard work as Meeting Chair, organizing the pre-meeting conference for local stakeholders, local involvement and opening reception. I suspect IMFAR 2014 may be remembered as the year of the IMFAR Aquarium reception – and, of course, of wonderful science!

The Program Co-Chairs, Joe Piven and Laura Grofer Klinger have put together a fantastic scientific agenda. I am also very grateful for their skilful work reorganizing and rationalizing the abstract submission and review process. We are lucky that Laura is also a Board member (Past Treasurer), and the Program Chairs have taken very seriously INSAR's mission of 'Setting the Bar...[to] promote and enhance the highest quality research' at our annual meeting. The standard for acceptance has been raised, and there will be more themed panels of talks than in previous meetings. Laura and Joe have also endeavoured to give special prominence to the Poster Sessions, avoiding clashes with Oral Sessions and putting on refreshments for the early evening Poster Sessions. Do come and see all the posters at lunchtime and after the Oral Sessions!

Another highlight not to be missed is the presentations by the INSAR Award winners. Every year at IMFAR it is our pleasure to honor people at all stages of their careers in autism research. The Lifetime Achievement Award honors a researcher who has made an enormous contribution to the field over their many working years. Don't miss the opportunity to hear Fred Volkmar's acceptance speech; we all have so much to learn from those who were pioneers in researching autism. Peter Bell, recipient of this year's Advocate Award, will also have unique insights to offer in his speech, as parent, advocate and leading non-profit executive. We will also celebrate the achievements of early career scientists with our Dissertation and Young Investigator Awards, and the Slifka / Ritvo Innovation in Autism Research Awards.

I must thank the wonderful Board of INSAR. I cannot imagine a better group to work with, and together we are moving forward on new initiatives for our training and global reach missions. This year we have initiated a preconference workshop for early career researchers, focusing for 2014 on grants and funding. David Mandell and the Student Committee are also working hard on plans for a new INSAR virtual Summer Institute. We are increasing our global reach by introducing very low rates for low / middle-income countries, increasing Travel Awards, and planning for international satellite meetings and a new initiative to host global open-access autism research tools.

Finally, the Board of INSAR is supported by tremendously hard-working and talented volunteers in all our committees, and by the fantastic Jennifer Gentry and her colleagues from Association Resources and wonderful Joe Dymek and Jennifer Marshall from Conference Direct. It is thanks to them that IMFAR runs so smoothly.

I believe I am the first non-North American President of INSAR, so please make a shy Brit feel at home in Atlanta, and come and tell me how we can make this meeting and your Society even better!

Francesca Happé, Ph.D. President of INSAR

1. Hazyre.

# **Speaker Ready Room** for Oral Presenters

Location: Room M103

All speakers should stop by the Speaker Ready Room to upload their slides prior to their presentation time. A staff person will be available to help speakers upload their slides and other files. If at all possible, please upload your slides the day before your presentation. The Speaker Ready Room will be open as noted below:

 Wednesday, May 14
 3:00 p.m. - 6:00 p.m.

 Thursday, May 15
 8:00 a.m. - 5:00 p.m.

 Friday, May 16
 8:00 a.m. - 5:00 p.m.

 Saturday, May 17
 8:00 a.m. - 1:30 p.m.

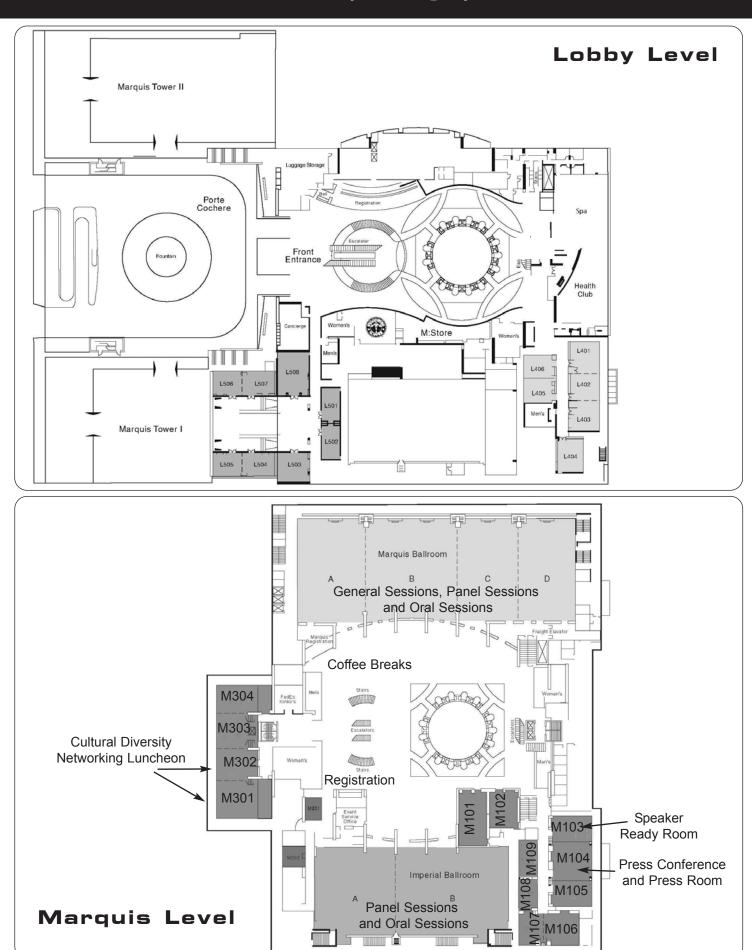

If speakers do not upload their slides ahead of time, they can still load them on to the computer before they present. However, if there are problems loading the presentation just before presenting, the speaker runs the risk of using up his / her presentation time.

On behalf of Marcus Autism Center, we are proud to welcome you to Atlanta for the International Meeting for Autism Research. To make your visit as pleasant as possible, we have created an interactive smartphone application to guide you through the event. Visit Marcus.org/IMFAR for instructions on how to download the app.

# Wednesday, May 14

# 1st Annual INSAR Early Career Development Preconference Workshop (pre-registration was required)

Noon — 3:00 p.m. ● Atlanta Marriott Marquis — Imperial Ballroom A

The INSAR Board in conjunction with the Student Committee is hosting the first annual early career development preconference workshop. This is a three-hour workshop focused on grant submission and review process. Reservations were accepted prior to the meeting and were open to current INSAR student members (graduate, medical and postdoctoral students).

Funding agencies will include: Alice Kau, NICHD; Lisa Gilotty, NIMH; Alison Singer, President of Autism Science Foundation; John Spiro, Deputy Scientific Director of SFARI; Rob Ring, Chief Science Officer of Autism Speaks

# Cultural Diversity Pre-Conference Workshop (pre-registration was required)

1:00 p.m. — 5:00 p.m. • Atlanta Marriott Marquis — Imperial Ballroom B

The INSAR Cultural Diversity Committee is pleased to announce this workshop: Race, Ethnicity, and Cultural Identity in Autism Research and Practice: What is the Relevance?

The workshop will begin with a discussion led by Richard Grinker about how these terms have been conceptualized and used in related fields, and what we may learn from this. Participants will then meet in small workgroups to discuss race and ethnicity in the context of their own countries and work, and how these concepts relate to research and practice in the field of ASD. The preconference workshop will form the basis of a paper that incorporates both the theoretical and research aspects of race and ethnicity in the field of ASD.

# Thursday, May 15 and Friday, May 16

# Student "Meet-the-Experts" Roundtable Luncheons

(pre-registration was required)

Lunch period: 12:15 — 1:30 p.m. each day • Atlanta Marriott Marquis — Meeting Room A703 -A704

Student scientists and postdoctoral researchers, bring your lunch and network with expert autism scientists in a unique and informal format. Join a roundtable with the autism expert of your choice, who will share experiences about their career, research from their laboratory and advice on how to build a successful research career. Reservations were accepted prior to the meeting and were open to current INSAR student members (graduate, medical and postdoctoral students). Seating is limited.

# Thursday, May 15

# 5th Annual IMFAR Student Social

7:00 p.m. (directly following the poster reception) • Max Lager's Wood-Fired Grill & Brewery — a short walk from the conference hotel: 320 Peachtree St NE, Atlanta, GA 30308, (404) 525-4400

All INSAR student members are invited to join us for an evening of informal socializing and networking among students and trainees actively engaged in autism research. We have rented the upstairs bar area and private deck, which has a private bar, pool tables and waitstaff. No ticket required.

This event is hosted by the INSAR Student Committee. Funds for complimentary food were generously provided by the INSAR Board of Directors. Cash bar.

# Friday, May 16

# Community Advisory Committee (CAC) Community Stakeholder\* Luncheon

12:15 — 1:30 p.m. • Atlanta Marriott Marguis — Atrium Level, Room A706 and A707

Autism stakeholders are invited to attend the 5th annual Stakeholder\* Luncheon. This event is organized by members of the INSAR Community Advisory Committee (CAC) as an avenue to bridge the gap between scientists and members of the autism community. Pre-registration is not required. Hosted by the INSAR Community Advisory Committee.

\*The term "stakeholder" has various definitions. In the context of the CAC, a stakeholder is someone who is affected by, or has a personal investment in autism.

Co-Sponsored by: Autism BrainNet and Autism Speaks

# **Cultural Diversity Networking Luncheon**

12:15 — 1:30 p.m. • Atlanta Marriott Marquis — Meeting Room M301 and M302

Bring your lunch to the room. Pre-registration is not required.

### **IMFAR 2014 KEYNOTE SPEAKERS**

#### John Colombo, Ph.D.

Dr. Colombo received his Ph.D. in Psychology (1981) from the State University of New York at Buffalo. After one year at Youngstown State University (1981-1982), and six years (1982-1988) as a research associate with the Bureau of Child Research at the University of Kansas, he joined the faculty of the College of Liberal Arts and Sciences at the University of Kansas in 1988, and has been a member of the Department of Psychology since January of 2002. Since 2004, he has served in an administrative role at the Schiefelbusch Institute for Life Span Studies, the largest of 10 freestanding designated research centers at the University of Kansas. After a national search in 2008, he was named director of the Institute.

Dr. Colombo's research interests are in the developmental cognitive neuroscience of attention and learning, with a special focus on early individual differences and how they relate to the typical and atypical development of cognitive and intellectual function. He conducts basic research on the development of attention in infancy and early childhood at laboratories located in suburban Kansas City at the KU Edwards Campus and in collaboration with colleagues at the Department of Nutrition and Dietetics he conducts clinical trials on the effects of nutritional supplementation on developmental/cognitive outcomes at the KU Medical Center. Finally, he collaborates with colleagues on the search for early biobehavioral markers for autism at the Wakarusa Research Facility in Lawrence. He trains students through a number of interdisciplinary programs, including the Developmental or Cognitive doctoral areas in the Department of Psychology, the Child Language Doctoral Program, and the Clinical Child Psychology doctoral program.

Dr. Colombo is the current editor of *Infancy*, and is a past Associate Editor (2007-2013) for *Child Development*. He is a Fellow in the American Psychological Association (Division 7: Developmental Psychology), a charter member and fellow in the Association for Psychological Science, and a member of the Psychonomic Society. A list of his publications (with many links to .pdf copies) can be obtained at his home page at ResearchGate.

#### Marsha R. Mailick, Ph.D.

Dr. Marsha R. Mailick is the Director of the Waisman Center at the University of Wisconsin-Madison (UW-Madison). She received her Ph.D. in social policy from Brandeis University and became an associate professor at Boston University before joining UW-Madison. She is the principal investigator of the Waisman Center's Intellectual and Developmental Disabilities Core Grant, awarded by the National Institute of Child Health and Human Development. The focus of Dr. Mailick's research is on the life course trajectory of developmental disabilities. She is interested in how the behavioral phenotype of specific developmental disabilities, including autism, fragile X syndrome, and Down syndrome, changes during adolescence, adulthood, and old age. In addition, she studies how the family environment affects the development of individuals with disabilities during these stages of life, and reciprocally how parents and siblings of individuals with disabilities are affected. Her current research includes three projects: a 14-year longitudinal study of autism during adolescence and adulthood, research on a demographically-representative sample of parents of individuals with developmental disabilities, and a study of family adaptation to fragile X syndrome (FXS). She recently completed an epidemiological study of the premutation of FXS and a 20-year follow-up of a cohort of older adults with Down syndrome, examining how the family environment shapes outcomes in midlife and old age. Together, these studies offer specific insights about developmental disabilities across the life course, and the impact on families.

#### **Professor Declan Murphy**

Professor Murphy is the Mortimer D. Sackler Professor of Translational Neurodevelopment, and Director of the Sackler Institute of Translational Neurodevelopment, Institute of Psychiatry (IOP), King's College London. He is also Head of Department of Forensic and Neurodevelopmental Sciences (IOP), and Director of the Behavioural and Developmental Psychiatry Clinical Academic Group, King's Health Partners, King's College London. In the latter role, his team delivers both Local and National services for people with autism.

His overarching mission is to translate research from 'bench to bedside' and develop new diagnostic approaches and treatments. The research work undertaken in his laboratory currently ranges from using stem cells and animal models to neuropsychological studies and neuroimaging, clinical trials (including behavioral interventions) and Health Services research.

Professor Murphy completed his undergraduate training in Medicine at University College (London) and his postgraduate training in psychiatry at the Maudsley Hospital and IOP (London). His research training was first at the IOP and then at NIH (Bethesda). He returned from NIH to the UK in order to establish a 'translational' research program in neurodevelopment.

In autism, Professor Murphy, together with colleagues in Oxford and Cambridge, established the MRC UK AIMS multicenter imaging network — the first in Europe. He also leads an NIHR-funded program grant on the health and service needs of individuals with autism as they 'transition' from childhood to adulthood. Additionally, he leads the European Union Innovative Medicines Initiative in autism (EU-AIMS http://www.eu-aims.eu/). This is a novel collaboration between organizations representing affected individuals and their families (Autism Speaks), academia (14 academic centers) and Industry, who for the first time in the world, have come together to develop the infrastructure underpinning the discovery of new treatments for autism.

## **IMFAR 2014 AWARDEES**

#### **INSAR Lifetime Achievement Award**

The Lifetime Achievement Award is given annually by the Executive Board of the International Society for Autism Research. This award acknowledges an individual who has made significant fundamental contributions to research on autism spectrum disorders that have had a lasting impact on the field. The focus of the awardee's research can be in any discipline.

#### Fred R. Volkmar, M.D.

Fred R. Volkmar, M.D., is the director of the Yale Child Study Center and the Irving B. Harris Professor of Child Psychiatry, Psychiatry, Pediatrics, and Psychology at Yale University. Four years after completing his residency at Stanford, Dr. Volkmar received a Fellowship in Child Psychiatry at the Yale University's School of Medicine and has been there ever since. He has dedicated his career to understanding and treating children with developmental disorders and is a leader in the field of autism research. He has

served as a teacher and mentor to others who are now leaders in the field. Dr. Volkmar's grants and publications run just short of 100 pages in his CV. He is editor of the *Journal of Autism* and is a gifted clinician and teacher, and his contributions have greatly improved the lives of children suffering from developmental disorders and their families.

### SLIFKA / RITVO Innovation in Autism Research Awards

The Alan B. Slifka Foundation seeks to promote innovative research on autism spectrum disorders that will lead to innovative treatments and improvements in the quality of life of individuals with autism. The Foundation wishes to partner with INSAR in honoring the most meritorious and innovative presentations at the IMFAR Annual Meeting. The Foundation will provide two research awards: one to a clinical researcher (diagnosis or treatment of autism or educational efforts) and the other to a basic researcher (epidemiology, genetics, neuroscience, immunology, etc). The recipients of the Slifka / Ritvo Awards will be recognized at the Awards Ceremony at the IMFAR Annual Meeting.

Basic Science Award: Adam Naples Clinical Award: Rosa Hoekstra

#### **INSAR Advocate Award**

This award honors community members / advocates who have influenced the ability to carry out autism research.

#### **Peter Bell**

For over a decade, Peter Bell has been one of the country's most respected autism advocates and nonprofit executives, serving as an effective leader with a compassionate voice on behalf of the autism community. From 2004 to 2007, Bell served as President and CEO of Cure Autism Now (CAN), one of the founding organizations of IMFAR. During his tenure at CAN, he played a critical role in the passage of the Combating Autism Act of 2006, helped establish the Autism Treatment Network and guided the organization through a

period of significant growth, fiscal improvement and community collaboration. In 2007, he championed the merger between CAN and Autism Speaks and assumed the role of Executive Vice President for Programs and Services where he founded and directed all activities of the Government Relations and Family Services departments for six and a half years. Among his notable accomplishments at Autism Speaks are: a strong record of public policy achievements including passage of federal legislation for funding autism research and services totaling \$1.8 billion and enactment of autism insurance laws in over 30 states; production of a highly regarded portfolio of resources and tool kits for individuals on the spectrum and their families; and a \$2.5 million community grant program that has benefited more than 30,000 people with autism. Bell also co-founded Advancing Futures for Adults with Autism (AFAA) and spearheaded important initiatives in the areas of employment, housing and residential supports for adults with autism. In February 2014, Bell was named President and CEO of Eden Autism Services. a leading autism service provider since 1975.

Bell has also represented the autism community by fulfilling a White House appointment to the President's Committee for People with Intellectual Disabilities (PCPID), co-founding and chairing the Community Advisory Committee of INSAR and serving as Chair / Vice Chair of the Autism Research Program for the Department of Defense.

Bell, earned a B.S. from Cornell University and an M.B.A. from the Kellogg School of Management at Northwestern University. He and his wife Liz live in Pennington, New Jersey with their three children. Their commitment to the autism community was inspired by their oldest son, Tyler, who was diagnosed with regressive autism in 1996. Tyler, age 21, continues to live at home with his parents as he prepares to transition into adulthood this year. His interests include a passion for painting, developing job skills with four employers and being an active member of his community.

# **Diversity Awards**

Diversity travel awards are provided to individuals who are currently members of INSAR, studying in or working in autism research in health related institutions, universities, public agencies or other stakeholder-related activities. The awards will be given to persons from racial, ethnic, and disability groups that have been historically under-represented in the sciences in their home country. The awards will provide a stipend of \$1,000 for individuals from North America, Europe and other parts of the developed world; for individuals from the developing world, the stipend will be \$1,500. The purpose of the awards is to increase the participation of individuals currently underrepresented in the biomedical, clinical, behavioral and social sciences, defined as: individuals from underrepresented racial and ethnic groups, individuals from low and middle income countries\* or individuals with disabilities, including ASD.

#### Welcome Address and INSAR President's Address

8:30 - Welcome from IMFAR Organizers

8:45 - INSAR President's Address

# **Keynote Address**

100 - Why Are There So Few Effective Treatments for Autism – and Can Translational Neuroscience Help?

9:00 - 10:00 - Marguis Ballroom

**Speaker:** Declan G. Murphy; Department of Forensic and Neurodevelopmental Sciences, Institute of Psychiatry, King's College London. UK

This talk will be to address; 1) why effective new treatments for ASD are so hard to find; 2) what needs to be done scientifically to fix the problem; 3) how new 'translational' neuroscience approaches can be harnessed to facilitate more rapid progress, but 4) this will require meaningful collaborations with affected individuals, industry, and the regulatory authorities together with major new international trials networks that test novel treatments in more biologically homogeneous cohorts.

# Educational Panel 101 - Infant Brain Development

10:30 - 12:15 - Marquis Ballroom BC

Session Chair: J. R. Pruett; Washington University School of Medicine

Autism spectrum disorder (ASD) is strongly suspected to involve altered developmental trajectories for structural and functional brain organization. Prospective infant sibling studies have brought increased focus on examinations of these potential changes in the first years of life, including prior to symptom expression. ASD researchers and providers need to be knowledgeable about basic aspects of infant brain development to be the most effective consumers of emerging scientific information about ASD. This panel will provide the nonneuroscientist and non-neuroimager with basic information about infant brain development and essential scientific methods used for interrogating it. Presentations will cover cellular processes, milestones of pre- and postnatal brain development, genetic and experiential effects on these processes, fundamentals of magnetic resonance imaging studies of the developing infant brain, developmental factors that influence trajectories for change in brain morphometry, and basic findings from brain imaging studies in infancy. Increased knowledge of infant brain development and the methods used for studies of brain changes in the first years of life will better enable ASD researchers and providers to assess emerging information about potential brain-based contributions to ASD in the first years of life.

# Scientific Panel 112 - Early Biomarkers and Endophenotypes of ASD: From Processes to Prognosis

1:30 - 3:30 - Imperial Ballroom B

Session Chair: K. Pierce; University of California, San Diego, CA

Biomarker discovery in medicine is foundational to advancing knowledge and developing beneficial clinical applications. Autism is a strongly genetic disorder, and as such, research on endophenotypes, a special case of biomarkers, is an especially important avenue to identification of genetic factors underlying neural and clinical manifestations. However, biomarker discovery is at an early stage because of the challenges in studying the disorder in the first years of life, its changing phenotypic nature as early development progresses, and its multidimensional genomic, biological and behavioral character. Nonetheless, as presented and discussed in this panel, new research studies using innovative systems biology, imaging and clinical methodologies, have been successful in illuminating genomic and neural developmental bases of the disorder, explicating the neurofunctional bases of important aspects of clinical heterogeneity, identifying endophenotypes and uncovering potential diagnostic and prognostic signatures in at risk infants and toddlers. Discussion will address the pivotal role played by early biomarkers in general and endophenotypes in particular in clarifying mechanisms and processes, phenotypic heterogeneity, neural and clinical developmental trajectories. Discussion will consider early biomarkers as standing at a crucial crossroad pointing backward to earlier developmental processes, states or events, including potential etiological ones, and forward insofar as they explain unfolding development and serve as diagnostic and prognostic risk predictors.

# Educational Panel 113 - Characterizing Autism: A Re-Examination of the Diagnosis and the Phenotype

1:30 - 3:30 - Marguis Ballroom BC

Session Chair: E. B. London; New York State Institute for Basic Research in Developmental Disabilities

In the 1970s the psychiatric community took a bold step in creating the DSM-3, which for the first time provided standardized and reliable criteria for psychiatric diagnoses. Despite being an important improvement, it also created new problems. The diagnoses were created by consensus of committees rather than from data-driven evidence to ensure external validity. The framers warned that these diagnoses were "way stations" until better scientifically-based diagnoses could be made. Categories had unclear boundaries with other disorders and with normality. These categories, (which did not "carve nature at its joints"), created the new concept of comorbidities. It is the rare patient who has only one diagnosis. The categorical diagnoses are poor at prognosis and treatment guidance and have a wide range of heterogeneity in their presentations. Despite these problems, the diagnoses have been reified and the failure to use these categories imposes severe restrictions and often skews the research that is done. In this symposium we intend to examine the diagnosis of DSM autism in light of the problems enumerated above, using evidence from clinical, genetic and brain circuit studies. We also will review some of the proposed alternatives to the categorical diagnoses, with special attention to the NIMH's RDoCs.

## Scientific Panel 114 - Autism in Africa

1:30 - 3:30 - Marguis Ballroom D

Session Chair: R. A. Hoekstra; The Open University, United Kingdom

There is a dearth of autism research on the African continent; this scientific panel session aims to highlight recent research progress addressing this gap. The panel includes scientific presentations from two sub-Saharan African countries, using a combination of qualitative and quantitative methodologies and reporting on both urban and rural African populations. Altogether, the findings from these studies highlight the major barriers to appropriate support for families of children with autism in Africa (including the severe shortage of diagnostic and educational services, lack of awareness about autism and its causes, and high levels of stigma), and report on a promising scalable model that can help tackle these problems by training frontline community-based health extension workers. The challenges and opportunities discussed in these presentations apply not just to the countries under study, but have relevance for the entire African continent and low/middle income countries elsewhere. During the panel discussion these common themes will be reviewed and priority areas for future research and opportunities for intervention will be highlighted, in order to facilitate future autism research, advocacy and capacity building efforts.

# 115 - Cognitive Modulation of Arousal in ASD: Linking Emotion Processing and Anxiety Across Development

1:30 - 3:30 - Imperial Ballroom A

Session Chair: E. J. Jones; Birkbeck College, University of London

Many individuals with ASD struggle to understand emotions and experience clinically significant anxiety, but little is known about the developmental origins of these difficulties. Here, we present data suggesting that both problems stem from atypical integration of cognitive and arousal responses to emotional situations. During development, infants learn to make appropriate cognitive interpretations of arousal states through social interaction. In ASD, we propose that early delays in face processing and atypical arousal responses compromise this developmental process, leading to persistent problems with emotional understanding and anxiety. Specifically, Jones and Wagner show that atypicalities in cognitive and arousal responses to emotion faces are present in infants at high-risk for ASD, that these atypicalities jointly relate to temperamental fear, and to later socialcommunicative deficits and early autism classification. Webb shows that children with ASD who display atypical electrophysiological responses to emotion faces at age 3 may be at risk for clinically significant anxiety by age 15. Finally, Gaigg demonstrates that anxiety and emotion understanding are strongly related in adults with ASD, and are underpinned by difficulties in cognitive appraisal of own arousal state. Taken together, these talks support a common developmental route to emotion processing difficulties and anxiety in ASD.

# Keynote Address and INSAR Awards Ceremony 116 - Lifetime Achievement Awardee

4:00 - 5:30 - Marguis Ballroom

Speaker: Fred R. Volkmar; Yale University, New Haven, CT

In this brief presentation I'd like to thank my teachers and students (who often have been my teachers) and colleagues before summarizing changes I've witnessed over the past three decades in our understanding of autism. Knowledge has increased both in terms of our understanding of autism as a brain based social disability and in treatment approaches that facilitate outcome. Areas where knowledge remains limited and important targets for future work will be summarized as will be the importance of integrating research knowledge with clinical work.

### Special Interest Groups (SIGs)

7:15 - 8:45

Location listed under each session

#### 126 - Risk Assessment, Management and ASD

Session Chairs: Dr. Laurie Sperry, Dr. Gary Mesibov, Dr. Todd Milford, Dr. Philip O'Donnell

Room A703

Our research group has worked collaboratively for two years and brings together scholars from the divergent fields of autism, forensic and clinical psychology, criminology, law, and education. Our focus is on the potential factors that predict increased risk for offending in people with ASD and management strategies to moderate those risks.

## 127 - Approaching Adulthood: Transitional and Vocational Issues in ASD

Session Chairs: Dr. David Nicholas, University of Calgary, Canada; Dr. Lonnie Zwaigenbaum, University of Alberta, Canada

Room A707

Aims (1) To continue to facilitate networking for substantive priority planning and research development (2) To work toward specific research plans and galvanization of international networks for addressing gaps and opportunities for transitional and vocational research in ASD.

### 128 - Technology and Autism

Session Chair: Sue Fletcher-Watson Committee: Gregory Abowd, Alyssa Alcorn, Renae Beaumont, Judith Good, Ouriel Grynszpan, Mari MacFarland, Helen Pain

Room A704

Technology and Autism: developing a framework for best practice in design, development, evaluation and dissemination of autism-specific technologies. The main issues raised at the 2013 SIG were: 1. the difficulty of appraising the volume and variety of technologies available for people with autism; 2. the lack of guidance for families and practitioners on how to use it; 3. the need for stronger research methodologies; 4. the need to share both data and technologies between researchers.

## 129 - Global Knowledge Translation for Research on Early Identification and Intervention in Autism

Session Chairs: Mayada Elsabbagh and Petrus de Vries Room A706

There is increasing appreciation of the need to enhance research impact through the iterative and dynamic process of knowledge translation: The synthesis, dissemination, exchange, and application of knowledge to improve quality of life for people affected by autism. This SIG will continue the dialogue on identifying knowledge gaps, barriers, and action priorities with a particular emphasis on global knowledge translation in the area of early identification and intervention for autism. The theme of this year's activities will be "To intervene or not to intervene: Effective and ethically sound application of evidence-based intervention models in diverse settings."

## Welcome Address and Sponsor Update

8:45 - Welcome from IMFAR Organizers

8:50 - Autism Speaks Update, Robert H. Ring, Ph.D.

#### **Keynote Address**

130 - Adolescents and Adults with ASD and their Families: Life Course Development and Bi-Directional Effects

9:00 - 10:00 - Marquis Ballroom

**Speaker:** Marsha R. Mailick; Waisman Center, University of Wisconsin-Madison, Madison, WI

How does the behavioral phenotype of autism spectrum disorders change from childhood to adolescence, and into adulthood and midlife? What is the life course trajectory of independent living skills, autism symptoms, and behavior problems? What changes occur when youth with autism leave high school and enter the adult world? What factors are predictive of successful employment? How does the family environment influence the developmental trajectory and how is the family environment influenced by having an adolescent or adult family member with an autism diagnosis? This presentation will address these questions using data from our 14-year longitudinal study of autism across the life course. The research is based on a community sample of the families of 406 individuals with autism who were between the ages of 10 and 52 when they were recruited at the start of the study and who subsequently participated in ten sequential points of data collection. Thus, we have assembled a rich resource with which to chart the life course development of autism and the bi-directional individual-family processes.

#### Oral Sessions

## 131 - Fundamental Processes in Cognition: Attention, Learning and Memory

10:30 - 12:15 - Marguis Ballroom D

Session Chair: D. M. Bowler; Autism Research Group, City University London, London, United Kingdom

- 10:30 131.001 The Intersection of Working Memory and Emotion Recognition in Autism Spectrum Disorders. S. A. Anderson<sup>-1</sup>, D. Robins<sup>2</sup> and T. Z. King<sup>3</sup>, (1)Neurology, University of Miami Miller School of Medicine, Miami Beach, FL, (2)Psychology, Georgia State University, Atlanta, GA, (3)Department of Psychology, Georgia State University, Atlanta, GA
- 10:42 131.002 A Visual Perceptual Task Provides Evidence for an Excitatory:Inhibitory Imbalance in Adults with Autism. J. Horder<sup>-1</sup>, M. A. Mendez<sup>-1</sup>, D. Spain<sup>-2</sup>, J. E. Faulkner<sup>-1</sup>, D. De La Harpe Golden<sup>-1</sup> and D. G. Murphy<sup>2,3</sup>, (1)Forensic and Neurodevelopmental Sciences, Institute of Psychiatry, King's College London, London, United Kingdom, (2)Department of Forensic and Neurodevelopmental Sciences, Institute of Psychiatry, King's College London, London, United Kingdom, (3)The Sackler Institute for Translational Neurodevelopment, Institute of Psychiatry, King's College London, London, United Kingdom

- 10:54 131.003 Atypical Classical Conditioning in Children with Autism Spectrum Disorder. P. S. Powell<sup>-1</sup>, L. G. Klinger<sup>2</sup>, M. R. Klinger<sup>3</sup> and A. T. Meyer<sup>4</sup>, (1)Psychology, University of North Carolina at Chapel Hill, Chapel Hill, NC, (2)TEACCH Autism Program; Department of Psychiatry, University of North Carolina, Chapel Hill, NC, (3)University of North Carolina at Chapel Hill, Chapel Hill, NC, (4)Dept. of Psychology, University of North Carolina, Chapel Hill, NC
- 11:06

  131.004 Enhanced Pattern Separation Memory in Adults
  Diagnosed with ASD. C. Nielson<sup>¬1</sup>, K. Stephenson<sup>2</sup>, M. E. Maisel<sup>2</sup>,
  A. R. Dorsett<sup>2</sup>, M. South<sup>3</sup> and C. B. Kirwan<sup>3</sup>, (1)Neuroscience Center,
  Brigham Young University, Provo, UT, (2)Department of Psychology,
  Brigham Young University, Provo, UT, (3)Psychology and
  Neuroscience, Brigham Young University, Provo, UT
- 11:18 131.005 Examining the Link Between Declarative Memory and Structural Language Ability in Children with Autism Spectrum Disorder (ASD). S. Anns, J. Boucher, D. M. Bowler and S. B. Gaigg, Autism Research Group, City University London, London, United Kingdom
- 11:30 131.006 The Effect of Visual Perceptual Load on Auditory
   Awareness in Autism Spectrum Disorder. J. Tillmann, A. Olguin,
   L. Gilmour and J. Swettenham, University College London, London,
   United Kingdom
- 131.007 Inhibitory Mechanisms Underlying Vibrotactile
  Perception Appear Altered in Children with ASD. N. A. Puts<sup>1,2</sup>,
  E. L. Wodka<sup>3</sup>, T. Koriakin<sup>3</sup>, M. Tommerdahl<sup>4</sup>, R. A. Edden<sup>1,2</sup> and
  S. H. Mostofsky<sup>5,6</sup>, (1)The Russell H. Morgan Department of
  Radiology and Radiological Science, The Johns Hopkins University,
  Baltimore, MD, (2)F. M. Kirby Center for Functional Brain Imaging,
  Kennedy Krieger Institute, Baltimore, MD, (3)Kennedy Krieger
  Institute, Baltimore, MD, (4)University of North Carolina, Chapel Hill,
  NC, (5)Laboratory for Neurocognitive and Imaging Research,

## 136 - Innovative Technology Demonstrations

10:00 - 1:30 - Rooms A601 & A602

These presentations highlight an area of technology and its application to autism spectrum disorder. This Session is held in Meeting Room A601 & A602 (separate from the general poster area).

- 201 136.201 A Characterization Study of Q & A Behavior on an Online Forum for Autism. H. Hong<sup>-1</sup>, G. D. Abowd<sup>-1</sup> and R. Arriaga<sup>-2</sup>, (1)School of Interactive Computing, Georgia Institute of Technology, Atlanta, GA, (2)Georgia Institute of Technology, Atlanta, GA
- ▶ 202 136.202 A Computerized Approach to Interviewing for ASD: Evidence for 3di's Value in Translation, and International Compatibility with DSM-5 Criteria. R. H. Warrington¹, H. Berntsen², J. Chuthapisith³, W. De La Marche⁴, K. Lai⁵, M. C. Lai⁶, W. Mandy¹, S. Merelli⁷, F. Mo⁵, K. Puura⁶, A. Rattazzi⁶, D. H. Skuse¹ and G. Slappendel¹⁰, (1)Behavioural and Brain Sciences Unit, UCL Institute of Child Health, London, United Kingdom, (2)Akershus University, LØRENSKOG, Norway, (3)Department of Paediatrics, Ramathibodi Hospital, Mahidol University, Bangkok, Thailand, (4)Department of Child and Adolescent Psychiatry, University of Leuven, Leuven, Belgium, (5)Psychiatry, Chinese University of Hong Kong, Tai Po, New Territories, Hong Kong, (6)Department of

- Psychiatry, National Taiwan University College of Medicine, Taipei, Taiwan, (7)San Paolo Hospital Medical School, Milan, Italy, (8)Department of Child Psychiatry, Tampere University and University Hospital, Tampere, Finland, (9)PANAACEA, Buenos Aires, Argentina, (10)Erasmus MC Sophia Kinderziekenhuis, Rotterdam, Netherlands
- 203 136.203 A Manualized Wireless Moisture Alarm Intervention for Teaching Toileting in Children with Autism.

  D. W. Mruzek¹, S. A. McAleavey², W. A. Loring³, E. Butter⁴ and T. Smith⁵, (1)University of Rochester Medical Center, Rochester, NY, (2)Biomedical Engineering, University of Rochester, Rochester, NY, (3)Pediatrics and Psychiatry, Vanderbilt University, Nashville, TN, (4)Nationwide Children's Hospital, Westerville, OH, (5)University of Rochester, Rochester, NY
- 204 136.204 A Pilot Study of the Vayu Vest: Effects of Deep Pressure Stimulation on Performance and Physiological Arousal. S. E. Reynolds<sup>-1</sup>, S. J. Lane<sup>-1</sup> and B. Mullen<sup>-2</sup>, (1)Virginia Commonwealth University, Richmond, VA, (2)Therapeutic Systems, Boston, MA
- ▶ 205 136.205 A Step Towards Anxiety-Sensitive Virtual Reality-Based Social Communication Platform: Implication on Physiology for Children with Autism. S. Kuriakose¹¹, P. Kumar¹, P. Raghavan² and U. Lahiri¹, (1)Electrical Engineering, Indian Institute of Technology, Gandhinagar, Ahmedabad, India, (2)Our Ashiana, Ahmedabad, India
- 206 136.206 A Video Analysis of Children with ASD Spontaneously Initiating about Discrepancies in a Virtual Environment: Interaction Profiles and General Trends. A. M. Alcorn¹, H. Pain¹, J. Good² and S. Fletcher-Watson³, (1)School of Informatics, University of Edinburgh, Edinburgh, Scotland, (2)Department of Informatics, University of Sussex, Falmer, Brighton, England, (3)University of Edinburgh, Edinburgh, Scotland, United Kingdom
- 136.207 ASC-Inclusion - a Virtual Environment Teaching Children with ASC to Understand and Express Emotions. S. Newman<sup>-1</sup>, O. Golan<sup>2</sup>, S. Baron-Cohen<sup>3</sup>, S. Bolte<sup>4</sup>, A. Baranger<sup>5</sup>, B. Schuller<sup>6</sup>, P. Robinson<sup>7</sup>, A. Camurri<sup>8</sup>, N. Meir-Goren<sup>1</sup>, M. Skurnik<sup>1</sup>, S. Fridenson<sup>2</sup>, S. ## 143 - Hyper or Hypo? Towards an Integrative Model of Network Connectivity in ASD

1:30 - 3:30 - Marquis Ballroom A

Session Chair: R. A. Müller; Dept. of Psychology, San Diego State University

The functional connectivity literature on ASD has grown exponentially in the past decade, but initial consensus on 'general underconnectivity' has been undermined by conflicting results and the growing awareness of methodological issues (e.g., head movement, spontaneous vs. task-driven signal fluctuations) that may have dramatic effects on findings. This panel is motivated by the need for a more nuanced and developmental understanding of functional connectivity and aims to present perspectives for a comprehensive model of network abnormalities in ASD that may reconcile the vast array of diverse and often seemingly inconsistent findings. Presentations in this panel will attempt to elucidate (i) how and why MRI findings (functional connectivity, DTI) have been divergent, (ii) how different analytic approaches can provide a comprehensive view of aberrant functional connectivity, (iii) how multimodal approaches, including electrophysiological techniques such as MEG, can contribute to more differentiated models of network abnormalities in ASD, and (iv) how differential findings may be reconciled in network-specific models that relate to core symptomatology.

- 1:30 143.001 Disrupted Emergence of Networks in ASD: Evidence from fcMRI and DTI. R. A. Müller', Brain Development Imaging Laboratory, Dept. of Psychology, San Diego State University, San Diego, CA
- 1:55 143.002 Local and Long-Range Functional Connectivity Abnormalities in ASD: Frequency-Specific Insights from MEG. T. Kenet', Neurology, Mass Gen Hosp/Harvard Med School, Charlestown, MA

144 - Getting SMART about Combating Autism with Adaptive Interventions: Novel Treatment and Research Methods for Individualizing Treatment

1:30 - 3:30 - Marguis Ballroom BC

Session Chair: D. Almirall; University of Michigan

The effective treatment of a wide variety of autism spectrum disorders (ASD) often requires an individualized (personalized), sequential approach to treatment, whereby treatment is dynamically adapted over time based on the individual's changing course. Adaptive interventions operationalize this type of individualized, sequential, decision making via a set of decision rules that specify whether, how, for whom, or when to alter the dosage, type or delivery of behavioral or pharmacological strategies in the treatment of autism. Adaptive interventions can be used as a guide for clinical practice. Recently, sequential multiple assignment randomized trials (SMART), a type of study design, were developed explicitly for the purpose of developing and optimizing adaptive interventions. However, adaptive interventions and

SMART are new to autism researchers. The overarching aim of this methodology-oriented educational panel is to (a) provide an introduction on the application of adaptive interventions and SMART in autism treatment and research, respectively, and (b) encourage a discussion on how adaptive interventions and SMART can be used to address complex ASDs for which there is wide treatment effect heterogeneity, or for which there is an array of effective treatments, some of which may be costly or burdensome.

## 145 - Resilience in Infants at High Risk for Developing Autism Spectrum Disorders

1:30 - 3:30 - Imperial Ballroom B

Session Chair: L. J. Carver; University of California, San Diego

Infant siblings of children with autism spectrum disorders are at increased risk for developing the disorder, and, even when unaffected, often show early signs consistent with ASD symptoms. Tracking early development in infant siblings of children with ASD can help with identifying early precursors to the development of ASD. Researchers who have been following children with ASD have noted that some children who show early signs associated with ASD later show patterns more consistent with typical development. An important, but often overlooked research question is what factors protect infants at risk from developing ASD. The talks in the proposed symposium describe studies of children who show trajectories of development that are consistent with resilient development. The presentations using converging methods including eye tracking and behavioral assessments to show patterns of improving trajectory and lessening symptoms in a subset of children who show early characteristics of ASD. Presentations will also discuss possible mechanisms for resilience, including early infant-caregiver interactions and looking behavior. We will also discuss implications of resilience for developing early intervention and prevention strategies.

## 146 - Phenomenology and Impact of Internalizing Symptoms in ASD Across the Lifespan

1:30 - 3:30 - Imperial Ballroom A

Session Chair: K. Gotham; Vanderbilt University

Internalizing comorbidity in the ASD population has received increasing attention due to its observed prevalence and clinical reports of associated impairment, however its exact relation to and impact within ASD are unclear. In this panel, we elucidate the phenomenology of anxiety and depressive symptoms in ASD using well-characterized samples spanning early schoolage to mid-adulthood. Data on internalizing comorbidity patterns will be presented from a developmental perspective, and with particular emphasis on disentangling whether these symptoms are consistent with the ASD phenotype versus separable and additive. Measurement of comorbid internalizing symptoms is considered across raters and using novel methodology (e.g., eye-tracking). Finally, we will present cutting-edge findings on the impact and outcome of affective distress in ASD from a variety of perspectives. We take a transdiagnostic approach to both internalizing symptoms (focusing on emotional distress and symptom ratings rather than categorical disorders), and to their potential mechanisms (e.g., gaze patterns and emotion regulation ratings are compared across ASD and typical controls). Discussion will focus on methodological considerations associated with psychiatric comorbidity patterns in ASD, and specifically on designing clinical research that is sensitive to transdiagnostic issues and employs state of the art and novel measurement of internalizing symptoms across the lifespan.

- 1:30 146.001 Modeling Growth of Internalizing Symptoms from Childhood Through Young Adulthood in Autism Spectrum and Developmentally Delayed Samples. K. Gotham<sup>-1</sup>, S. M. # 147 - IGF-1 and Its Analogs: Restoration of Biological Deficits in Neurodevelopmental Disorders Associated with Autism

1:30 - 3:30 - Marguis Ballroom D

Session Chair: O. Shcheglovitov; Stanford University School of Medicine

Recent studies have demonstrated the effectiveness of IGF-1 and related compounds to restore biological deficits in neurodevelopmental disorders associated with autism and intellectual disability, including Rett, Fragile X, and Phelan-McDermid Syndromes. Although, these disorders are caused by different genetic abnormalities, the ameliorative effects of IGF-1 and IGF-1(1-3) suggest the presence of common rescue pathways. In this session, we bring together individuals with diverse expertise that are studying cellular, molecular and behavioral phenotypes associated with Rett, Fragile X and Phelan-McDermid Syndromes, using animal and human models. The participants discuss the relevant mechanisms of action and perspectives on using IGF1 and its analogs as novel therapeutic agents for patients with ASDs.

149 - Towards an Integrated Neurocognitive Account of Local Versus Global Visual Processing in Autism Spectrum Disorders

3:30 - 5:30 - Marquis Ballroom D

Session Chair: B. Boets: KU Leuven

Atypical visual processing in autism spectrum disorders (ASD), such as superior processing of local details or substandard processing of global structures, has been investigated repeatedly, but research findings vary widely and are often contradictory. Here, we present a collection of behavioural and neuroimaging studies that investigate various levels of visual processing in individuals with ASD and well-matched typically developing (TD) controls. In particular, we aim to get a better understanding of the interrelation between local versus global visual processing, either by applying paradigms that try to disentangle the relative contribution of both types of processing or by applying paradigms that investigate the interplay between bottom-up and top-down processing. Findings generally indicate subtle group differences between individuals with ASD and TD individuals, which strongly depend on task-demands and stimulus characteristics. In line with the literature, this series of studies reveals a mixed pattern of results, ranging from evidence for a more locally oriented processing style and impaired

global processing, towards intact and even enhanced global integration capacities in ASD. It is concluded that atypical visual processing cannot currently provide us with a reliable endophenotype for ASD.

## 150 - Early Atypical Growth Patterns in ASD: Evidence from Behavioral, Neuroimaging, and Neurobiological Studies

3:30 - 5:30 - Imperial Ballroom B

Session Chair: K. Chawarska; Yale University School of Medicine

Brain over-growth in infancy is one of the best-replicated imaging findings in ASD. Considering the high correlation between HC and total brain volume, particularly in infancy, atypical HC trajectory may also provide a proxy for abnormal brain development during infancy. Even though early brain growth and, more generally, early somatic overgrowth is well-recognized in ASD, the underlying biological mechanisms and relationships to the etiology of ASD remain poorly understood. The proposed symposium will address a number of key questions regarding early overgrowth in ASD, including its prevalence and effects of gender on growth patterns, evidence from neuroimaging studies of infant siblings of children with ASD, animal models of autism risk factors, as well as studies modeling neuronal growth using induced pluripotent stem cells.

## 151 - Active Ingredients and Therapeutic Processes in Interventions for Autism Spectrum Disorders

3:30 - 5:30 - Marquis Ballroom BC

Session Chair: M. D. Lerner; Stony Brook University

Research on treatments for social deficits in autism spectrum disorders (ASD) has recently proliferated, leading to identification of interventions considered empirically-supported (Rogers & Vismara, 2008; Reichow & Volkmar, 2010). However, few studies have yet addressed the nuanced questions of "why and how does it work, for whom, under what conditions" (Kazdin, 2007). This has been identified as a crucial priority (e.g., Lerner, et al., 2012; Maglione et al., 2012), as identification of "active ingredients" and therapeutic mechanisms is essential to achieving the goal of optimized evidence-based therapies. There currently exist a wide array of methodological and statistical approaches to uncovering processes responsible for change in interventions. In this panel, we will introduce and describe several different approaches with unique applications to disentangling therapeutic processes across childhood. To achieve coordinated teaching across research groups, cutting edge treatment data will be used to elucidate both how given process variables relate to discrete outcomes, and what they may reflect about general process analysis principles. Key factors such as parental involvement, operative therapist behaviors, conceptual and manual fidelity, and knowledge- versus performance-training strategies will be presented, with an integrative discussion aimed at highlighting the utility and accessibility of studying therapeutic processes in ASD.

### Scientific Panel

152 - Drug Development in Autism Spectrum Disorder

3:30 - 5:30 - Imperial Ballroom A

Session Chair: L. Scahill; Marcus Institute, Emory University

Two medications, risperidone and aripiprazole, are approved by the U.S. Food and Drug Administration for the treatment of irritability in children age 5 to 17 with DSM-IV autistic disorder. There are no approved medications for social disability or repetitive behavior in autism specifically or autism spectrum disorder (ASD) more broadly. Over the past decade several genes have been identified that dramatically increase the risk of ASD. Identified genes include those causing monogenic disorders (e.g., Fragile X, neurofibromatosis), as well as rare mutations and de novo mutations. These genetic abnormalities may affect the structure and function of neurotransmitter receptors, the intracellular function of neurons, development of neural networks and signaling between neurons among other neurobiological functions. As more is learned about the function of the genes that contribute to the etiology of autism, there is expanding potential for drug development. This scientific panel will present a series of talks outlining the central issues facing drug development in ASD: the role of pilot studies, compound selection, the importance of biomarkers and ethical considerations for studies involving developmentally disabled individuals.

### Scientific Panel

183 - Making Sense of the Links Between Sex Differences and Autism: From Biology to Behavior

3:30 - 5:30 - Rooms A703 & A704

Session Chair: M. C. Lai; University of Cambridge

The male-bias in the prevalence of autism has two major implications for understanding the emergence of autism. First, studies into mechanisms associated with the development of typical sexual differentiation may provide insight into the etiologies and development of autism. Second, identifying similarities and differences between males and females with autism can inform us about shared characteristics and mechanisms central to the emergence of autism, as well as sex-specific and/or sex-linked characteristics, etiological mechanisms, susceptibility and protective factors. This Scientific Panel brings together research from four different groups addressing these two inter-linked

themes. The first two presentations discuss how sex-differential gene expression and associated regulatory mechanisms are potentially related to the genetic and epigenetic etiologies of autism. The second two presentations compare and contrast girls and boys, women and men with autism, integrating across levels of brain structure, neural activation, cognition and behaviors. The discussant will address the implications from the interaction of both threads of research, as well as future directions elucidating the links between sex differences and autism.

## 158 - Intellectual and Behavioral Assessment and Measurement

5:30 - 7:00 - Atrium Ballroom

63 158.063 Calibrated Severity Scores for the Autism Diagnostic Observation Schedule-Toddler Module. A. N. Esler<sup>-1</sup>, V. Hus Bal<sup>2</sup>, W. Guthrie<sup>3</sup> and C. Lord<sup>4</sup>, (1)Rm 340, University of Minnesota, Minneapolis, MN, (2)University of Michigan, Ann Arbor, MI, (3)Florida State University Autism Institute, Tallahassee, FL, (4)Weill Cornell Medical College, White Plains, NY

- 64 158.064 Abnormal Vestibulo-Ocular Reflexes in Autism Spectrum Disorders. B. Wilkes<sup>-1</sup>, T. B. Carson<sup>2</sup>, J. H. Ko<sup>3</sup>, J. W. Bodfish<sup>4</sup>, K. M. Newell<sup>3</sup> and M. H. Lewis<sup>5</sup>, (1)Psychology, University of Florida, Gainesville, FL, (2)University of Florida, Gainesville, FL, (3)Pennsylvania State University, University Park, PA, (4)Department of Hearing and Speech Sciences, Vanderbilt University, Nashville, TN, (5)Psychiatry/Psychology, University of Florida, Gainesville, FL
- 65 158.065 Clinical Application and Validation of the Autism Detection in Early Childhood (ADEC) in Referred Children Aged 14-36 Months in a US Pediatric Hospital. D. Hedley 1,2, R. E. Nevill², Y. Monroy Moreno 1,3, B. Murphy 1,4, N. Fields², J. Wilkins¹, J. A. Mulick⁵ and E. Butter¹, (1)Nationwide Children's Hospital, Westerville, OH, (2)The Ohio State University, Columbus, OH, (3)National Autonomous University of Mexico, Iztacala, Mexico, (4)Capital University, Columbus, OH, (5)Pediatrics, The Ohio State University, Westerville, OH
- ▶ 66 158.066 Population-Based Screening for Autism Spectrum Disorder Using the Social Communication Questionnaire. L. A. Carpenter¹, C. C. Bradley¹, A. E. Wahlquist², J. Charles¹, W. Jenner¹, A. P. Cohen¹, H. Specter³ and L. B. King¹, (1)Pediatrics, Medical University of South Carolina, Charleston, SC, (2)Public Health Sciences, Medical University of South Carolina, Charleston, SC, (3)Pediatrics, Medical University of South Carolina, Chaleston, SC
- 67 158.067 Associations Between Handwriting Fluency and Motor Control in Children with Autism. B. Dirlikov¹, S. H. Mostofsky².³, A. J. Bastian⁴ and M. B. Nebel³, (1)Kennedy Krieger Institute, Baltimore, MD, (2)Laboratory for Neurocognitive and Imaging Research, Kennedy Krieger Institute, Baltimore, MD, (3)Department of Neurology, Johns Hopkins School of Medicine, Baltimore, MD, (4)Johns Hopkins School of Medicine, Kennedy Krieger Institute, Baltimore, MD
- 68 158.068 Attenuation but Persistence of Normative Sex Differences in Empathizing, Systemizing, and Autistic Traits in 800 High-Functioning Adults with Autism: A Big-Data Test of the 'Extreme Male Brain' Theory. S. Baron-Cohen', S. A. Cassidy', B. Auyeung', C. Allison', M. Achoukhi', S. Robertson' and M. C. Lai', (1)Autism Research Centre, University of Cambridge, Cambridge, United Kingdom, (2)Autism Research Centre, Department of Psychiatry, University of Cambridge, United Kingdom, (3)Department of Psychiatry, National Taiwan University College of Medicine, Taipei, Taiwan
- 69 158.069 A Novel Severity Measure for Quantitative Description of Heterogeneity in Autism. B. Tunc<sup>-1</sup>, Y. Ghanbari<sup>-1</sup>, A. R. Smith<sup>-1</sup>, J. Pandey<sup>2</sup>, A. N. Browne<sup>2</sup>, R. T. Schultz<sup>2,3</sup> and R. Verma<sup>-1</sup>, (1)Department of Radiology, University of Pennsylvania, Philadelphia, PA, (2)Center for Autism Research, The Children's Hospital of Philadelphia, Philadelphia, PA, (3)Departments of Pediatrics and Psychiatry, University of Pennsylvania, Philadelphia, PA
- 70 158.070 Emotion Dysregulation in Children and Adolescents with Autism Spectrum Disorder. A. C. Samson<sup>-1</sup>, A. Y. Hardan<sup>2</sup>, J. J. Gross<sup>1</sup>, J. M. Phillips<sup>2</sup>, Y. Arbab<sup>3</sup> and R. W. Podell<sup>4</sup>, (1)Department of Psychology, Stanford University, Stanford, CA, (2)Psychiatry and Behavioral Sciences, Stanford University School of Medicine, Stanford, CA, (3)Psychology, Stanford University, Stanford, CA, (4)Teachers College, Columbia University, New York, NY
- 71 158.071 Behavioral Evidence of Hemispheric Disconnectivity in Autism Spectrum Disorders. C. Jung and J. J. Hutsler, (1)University of Nevada, Reno, Oakland, CA, (2)Cognitive and Brain Sciences, University of Nevada Reno, Reno, NV
- **72 158.072** Behavioral and Cognitive Characteristics of Females and Males with Autism in the Simons Simplex Collection. R. Embacher<sup>-1</sup>, T. W. Frazier<sup>2</sup>, S. Georgiades<sup>3</sup>, S. L. Bishop<sup>4</sup> and A. Y. Hardan<sup>5</sup>, (1)Center for Autism, Cleveland Clinic Children's

### Special Interest Groups (SIGs)

7:15 - 8:45

Location listed under each session

### 162 - Autism Social, Legal and Ethical Research

Session Chairs: Liz Pellicano, Ph.D., Institute of Education, Univ. of London; Michael Yudell, Ph.D., Drexel Univ. School of Public Health; Bryna Siegel, Ph.D., Autism Center of N. Calif. & UCSF Room A706

Political and Ethical Considerations in Autism Research and Treatment. The third year of this SIG will explore social, ethical and legal issues concerning autism research and treatment, particularly how these impact the needs of less able individuals who are or will soon become adults. Speakers will include:

Dr. Bryna Siegel, Dr. Deborah Barnbaum, Dr. Carolyn Klebanoff and John Elder Robison will act as Discussants

### 163 - Minimally Verbal Individuals

Session Chairs: Nancy Jones, Ph.D., Terry Katz, Ph.D., Connie Kasari, Ph.D. Room A704

The goal for 2014 is to develop practice parameters for minimally verbal individuals (MVI) in the areas of: characterization, evaluation, intervention, developmental considerations and underserved populations. We will facilitate mentorship partnerships within the projects. Specific aims include: 1) Provide a brief review of current literature 2) Workgroups will: a. Discuss the current literature and identify critical gaps b. Outline plans for the development of one or two specific practice parameters c. Establish the project goals and key milestones, aiming to present at IMFAR 2015. d. Leaders will organize project teams with mentors partnered with junior faculty and student members.

### 164 - Sensory Motor Special Interest Group (SMIG)

Session Chairs: Alison Lane, University of Newcastle, Australia, Justin Williams, University of Aberdeen, Scotland

Our goal for 2014-2015 is to foster collaboration between sensory and motor researchers. The Sensorimotor Interest Group (SMIG) was formed from two separate sensory and motor special interest groups. Hence, participants tend to have a primary interest in either sensory or motoric aspects of autism. However, motoric and sensory problems are closely related, and indeed, we consider that impaired sensori-motor integration is a core developmental impairment in autism. As such, the next generation of researchers in this field will likely spend considerable time in their careers exploring these questions. We consider that a valuable function of our group is to promote and facilitate research, which can further explore the relationship between motor and sensory problems.

# 165 - The Development of Attention: Implications for Early Identification

9:00 - 10:00 - Marguis Ballroom

Speaker: John Colombo, Ph.D.; University of Kansas, Kansas City, KS

Even though William James claimed in 1870 that "everyone knows what attention is," many of the fundamental questions about attention remain unanswered nearly 150 years later. In this talk, I will describe a framework for conceptualizing the basic construct of attention, recent advances in the neural substrates that presumably underlie the construct. In addition to reviewing the developmental course of attention from infancy through early childhood, I will describe a framework for thinking about how attention relates to the emergence of executive function, and review the degree to which early attention is related to later language and cognitive outcomes. Finally, I will review recent findings derived from the study of attention that are relevant to the early identification of autism spectrum disorders.

### Scientific Panel 178 - Characterizing Connectivity in Infants and Toddlers at High-Risk for Autism

1:30 - 3:30 - Marquis Ballroom BC

Session Chair: S. Paterson; The Children's Hospital of Philadelphia

Research involving older children and adults with autism spectrum disorder (ASD) has identified a range of atypicalities in brain structural and functional connectivity. However, little is known about how and when connectivity becomes implicated in the emergence of ASD between 6 and 24 months. These questions are addressed in this panel through multimodal imaging studies encompassing structural and functional connectivity analysis in infants at high risk for ASD and controls. These studies investigate changes in resting state connectivity, and various aspects of diffusion-based structural connectivity and white matter organization via tract-based morphometry, analysis of network metrics and full brain connectomics, to present a comprehensive characterization of connectivity changes during this critical developmental period. Our data demonstrate that changes in connectivity emerge over this period and parallel the timing of group differences in behavior, with differences in early sensory motor areas apparent at six months and higher order brain areas implicated at 12-24 months, as more complex social impairments appear. These studies provide important new information relevant to: 1) understanding underlying neural mechanisms in ASD, 2) very early developmental trajectories that are potential target phenotypes for exploring links to etiology and teasing apart heterogeneity, and 3) early detection and intervention targets.

### Scientific Panel 179 - The Role of Environmental Epigenetics in the Etiology of ASDs

1:30 - 3:30 - Imperial Ballroom A

Session Chair: M. D. Fallin; Johns Hopkins School of Public Health

Previous investigations into the etiology of autism spectrum disorders have focused on genetic influences or environmental exposures, independently. The scientific literature has recently recognized the importance of both sources of risk for ASDs, and the potential for gene-environment interaction. However, the mechanism of risk through environmental exposures, and interplay of environmental exposures on gene expression, has largely been unexplored. The purpose of this scientific panel is to present background and new evidence for epigenetic associations with environmental exposures and with ASDs. A primary focus will be on the science of epigenetics, which refers to the many layers of molecular mechanisms that control gene expression, many of which are susceptible to environmental influences. The potential role of epigenetic mechanisms in environmental risk for ASDs, and for mechanisms of geneenvironment interaction will be discussed. The panel will specifically cover examples of past and current exposures of concern, mechanisms of epigenetic action, utility of epigenetic signatures for ASD research broadly, and windows of developmental susceptibility-including somatic and germ cell mutations. Speakers will present new findings in epigenetics in ASD and research projects underway, including both human and animal model approaches.

### Scientific Panel 180 - Illuminating the Developmental Neuropathology of ASD

1:30 - 3:30 - Marquis Ballroom D

Session Chair: N. Sestan; Yale School of Medicine

Exome sequencing has led to robust identification of genes associated with Autism Spectrum Disorder (ASD), thus offering an unprecedented opportunity to investigate its neuropathology. However, the large number of genes affecting risk and their numerous biological functions challenge conventional genetic methodologies. To overcome this hurdle we integrate recent ASD gene discoveries with genome-wide analysis of gene expression and regulation in the developing human brain to highlight common biological mechanisms leading to ASD. We will present: 1) Gene-discovery from exome sequencing of the Simons Simplex Collection and where these genes converge in their expression in the developing human brain; 2) A novel approach to integrating exome and expression data to greatly accelerate gene discovery; 3) A map of the gene network regulated by CHD8, a chromatin modifier with the best evidence of ASD-associated via loss of function mutations; and 4) Development of zebrafish models to assess hypotheses of neuropathology in vivo. Through integration of psychiatry, neuroscience, genetics, and statistics we present a strategy that uses the genes discovered by exome sequencing to illuminate features of the developmental neuropathology that underlie ASD.

# 181 - New Insights into the Correlates and Processes of Competent Peer Relations During Preschool

1:30 - 3:30 - Marquis Ballroom A

Session Chair: N. Bauminger; Bar-llan University

In typical development, "peers are necessities, not luxuries" (Hartup, 2009, p. 3), both for well-being and for children's growth of cognitive, linguistic, and social skills. Peer relations (rather than parent-child relations) constitute one of the major known deficits for children with ASD (APA, 2013); yet there is considerable heterogeneity. Peer relationships lie on a continuum ranging from a compelling lack of awareness of others to relatively intact peer relations. The peer relationship difficulties noted in older children with ASD likely begin early, but these processes during preschool are not well understood. In this symposium we provide novel and broad insight into the process with a focus on language (pragmatic); social-cognitive (Theory of mind and joint attention); emotion (emotion knowledge, regulation, temperamental negativity and effortful control) and neuropsychological (executive function) correlates of competent peer relations. Novel data will be presented that is based on multidimensional assessment procedures, combining semi-structured and spontaneous observations of peer relations, experimental tasks, and parent reports. Better understanding of the beginnings of peer relationships should provide insight into later difficulties and importantly pinpoint targets for early intervention for children with ASD.

# 182 - Implementing Group CBT for Youth with ASD and Anxiety in Clinical Settings: Bridging the Research to Practice Gap

1:30 - 3:30 - Imperial Ballroom B

Session Chair: J. Reaven; Univ. of Colorado Denver-JFK Partners

Children with high-functioning autism spectrum disorders (ASD) are at high risk for developing anxiety symptoms. Cognitive behavioral treatments (CBT) are frequently used in the general population with good success to reduce anxiety. Recently published studies have demonstrated significant reductions in anxiety for youth with ASD following modified CBT interventions (Storch et al. 2013). Because the majority of treatment studies have occurred in controlled university settings, generalizability to other settings is limited. The purpose of this symposium is to discuss variables that may increase the adoptability of evidence-based interventions, maximizing success for clinical practice and narrowing the research-to-practice gap. This symposium also addresses barriers to dissemination of evidenced-based intervention that target anxiety symptoms in

youth with ASD, and identifies approaches to fostering the adoption of empirically supported programs for youth with ASD in real-world settings. Four sites were trained in the Facing Your Fears (FYF) program (Reaven et al., 2011) and have implemented the treatment. Session topics include: 1) measurement of anxiety in youth with ASD, with an emphasis on real-world application; 2) mediators of treatment related to implementation; 3) factors that influence the adoption of evidenced-based interventions in clinical settings; and 4) balance between treatment fidelity and model adaptations.

### **GENERAL INFORMATION**

# IMFAR Annual Meeting – International Meeting for Autism Research

The year 2014 marks the 13th International Meeting for Autism Research (IMFAR). The IMFAR Annual Meeting was convened for the first time in November 2001, to provide ASD researchers from around the world with a focused opportunity to share the rapidly moving scientific investigation of ASD.

Until that meeting, ASD researchers competed with many other groups for the opportunity to share their work at large scientific meetings that covered a wide range of topics. While other meetings provided some opportunity to share high quality ASD research, none of them focused specifically on ASD. Funding for ASD research has increased steadily, highlighted by the emergence of private foundations, such as Autism Speaks and several NIH initiatives: The Autism Centers for Excellence (ACE), which replaces earlier NIH programs — The Collaborative Programs of Excellence in Autism (CPEA) and the Studies to Advance Autism Research and Treatment (STAART) network program. Stimulating more scientific progress in understanding ASD requires dedicated yearly venue for ASD researchers to share their findings and their resources.

Scientific progress in ASD also requires the continuous development of new scientists, from many disciplines. Scientific progress in ASD is dependent upon increasing the number and expertise of scientists working in this ASD from the wide array of the biological and behavioral sciences. Given the complex biological and behavioral nature of ASD, interdisciplinary training and ongoing mentoring of new scientists and promising graduate students is necessary to recruit talented young people in ASD research. We want to provide them with the motivation and mentoring needed to focus a career on ASD and related developmental disorders. Having an annual interdisciplinary meeting focused on scientific progress in understanding and treating ASD provides an unparalleled opportunity for recognizing, supporting, and motivating talented graduate students and postdoctoral fellows into a career in ASD research.

### **Objectives of the Meeting**

- 1. The International Meeting for Autism Research (IMFAR) is an annual scientific meeting, convened each spring, to exchange and disseminate new scientific progress among ASD scientists and their trainees from around the world. The first and primary aim of the meeting is to promote exchange and dissemination of the latest scientific findings and to stimulate research progress in understanding the nature, causes, and treatments for ASD.
- 2. Research on ASD involves sophisticated behavioral and biological approaches. ASD affects people's functioning in virtually every domain, requiring interdisciplinary research collaboration to gain comprehensive knowledge of the disorder. A second aim of the meeting is to foster dialogue among ASD scientists across disciplines and across methods.
- 3. The third aim is to promote the training and development of new ASD scientists by supporting the inclusion of postdoctoral and predoctoral trainees as well as junior faculty who are already working in ASD research. The opportunity for trainees and junior faculty to interact with established ASD scientists will foster the creativity and productivity of those at all levels.
- 4. The fourth aim is to foster diversity among ASD scientists by encouraging attendance and supporting access to the meeting for scientists and trainees from members of traditionally underrepresented groups, including those from ethnic minority groups, and those with disabilities.

### **Abstracts**

www.autism-insar.org

INSAR membership is open to individuals engaged in academic or research activities (full members), graduate students and postdoctoral researchers (student members) and others (affiliate members) vested in the study of autism spectrum disorders (ASDs).

Currently, the membership benefits entail the following:

- Free abstract submission to annual IMFAR meeting
- · Reduced registration fee for annual IMFAR meeting
- Eligibility to Chair a Special Interest Group (SIG)
- Free audio and / or video files of IMFAR presentations (Keynotes, IES, etc)
- Online subscription to Autism Research journal
- · Ability to vote and run for elected office in INSAR
- Submit job postings for the INSAR website (postings can be viewed by all visitors)
- · Online membership directory

In order to qualify for membership, fees must be paid annually and an initial application must be submitted to the INSAR Membership Committee.

Visit the INSAR website at www.autism-insar.org today to complete a membership application.

Data presented at the Annual International Meeting for Autism Research (IMFAR) is the sole responsibility of the authors. The sponsor of the Annual Meeting, the International Society for Autism Research (INSAR), takes no responsibility for its accuracy. Submitted IMFAR abstracts are reviewed only to ensure that the authors will be presenting empirical data and that aims and conduct of the study, as far as can be ascertained, are consistent with international ethical guidelines for scientific research (Declaration of Helsinki). Acceptance of an abstract for presentation at IMFAR does not represent an endorsement by the Society of the quality or accuracy of the data and their interpretation, which judgment must await publication in a peer review journal. Consumers should recognize that study data presented at meetings is often preliminary and in some cases speculative, and that findings and conclusions have not undergone the rigors of a true peer review process.

# **AUTISM RESEARCH**

# The highest-ranking journal devoted to the study of Autism Spectrum Disorders

Autism Research, the flagship journal of the International Society for Autism Research, encourages the submission of articles that take a developmental approach to the biology and psychology of autism, with a particular emphasis

on identifying underlying mechanisms and integrating across different levels of analysis. Autism Research publishes treatment studies that also illuminate underlying mechanisms. Usually papers should be empirical, but the Journal is willing to accept theoretical papers if they significantly advance thinking. Individuals included in research studies can span the full spectrum of ASD, including the broader phenotype, and there are no restrictions on study participants in terms of age or intellectual ability. The Journal is willing to take papers reporting work on animals or fundamental biology that are directly relevant to a greater understanding of ASDs.
